

I'm not robot

Open

the Android SQLite database is the example of the SQLite database creation, insert and show the details of the SQLite database at the Android ListView view using the SQLiteOpenHelper class. In general, in our shared preferences of Android applications, the internal storage and external storage options are useful to store and maintain a small amount of data. // Get the data repository in SQLITEDATABASE DB = this.getWritableDatabase(); // Create a new values map, where the names of the columns are the ContentValues keys
